Share your ideas on shared space

Recently, while savouring the view from a popular summit with a friend, a hillwalker arrived and, standing less than two metres from us, released a valley-filling Tarzan call, without the slightest recognition that this could intrude on the experience we were enjoying.

The rarity of such incidents illustrates how the vast majority of recreationists are respectful of the fact that we share our outdoor space with others.

With more people using Ireland's mountains for an increasingly diverse range of activities, the concept of how we share that space is becoming more important. This can present a challenge for walkers, who have traditionally only come across the occasional hill farmer or a forestry worker on the hills.

There are practical things we can do to prevent conflict, like not walking on a mountain bike route (tyre tracks and constructed jumps provide clues to the possible presence of bikes). As well as being a danger to yourself and others you

might be impinging on the enjoyment of mountain bikers using the route.

How can we transmit an awareness of shared space to others? For example, to those who don't realise that unfenced hillsides are privately-owned sheep-grazing areas and, therefore, not a suitable place to let your dog run loose, or that parking your car on a narrow road could prevent access for a local resident or the emergency services.

Competition

We're keen to gather top tips on how different recreational users of Ireland's upland areas can co-exist without conflict. Send your ideas, or examples of things you have seen or done, to helen@mountaineering.ie before January 31st 2019. All submissions will be considered by three members of Mountaineering Ireland's Access & Conservation Committee and a selection will be published in the Spring 2019 issue of the *Irish Mountain Log* ■

Smart parking

Your club arrives at your designated start point to find the car park already full; what to do?

Many places where we walk and climb have limited parking space. With increasing numbers enjoying the outdoors, congestion has become an issue in popular locations including Connemara, the Burren, the Mourne and the Wicklow Mountains.

It is tempting to park on a verge, in front of a forestry barrier, or at the side of a gateway, but doing so could block access for larger vehicles such as an ambulance or a tractor with a trailer. Attendees at a Mountaineering Ireland meeting in Galway in early May heard how badly-parked cars recently prevented a lorry with a fodder delivery getting into a farm in the Maumturks. Situations like that could easily result in landowners closing off access.

Rather than saying 'the Council should provide more parking space,' let's look at how we can take some responsibility ourselves. The Galway discussion generated lots of ideas for how groups of all sizes can help ease the pressure for parking:

- Park carefully - avoid wasting space between vehicles when parking in an unmarked car park.
- Commit to car-pooling - it saves money and reduces emissions too.
- Apps like What's App are useful for arranging lift shares.
- Be flexible about changing your route and starting elsewhere.
- Park at a suitably large area close to the hills and hire a local bus or car-pool.

HELEN LAWLESS

- Use public transport where it's available.
- Avoid parking in front of field gates; remember that many farmers move livestock at the weekend.
- Park a little further back from the hill or crag and walk in.
- Ask permission to park outside a house, farm or other premises.
- Steer clear of honeypots; make a point of exploring quieter areas.
- Share your walks calendar with other clubs in the area to avoid two big groups being in the same area on the same day.
- Where there's an honesty box in a car park, make sure to contribute.

If you have other ideas in relation to parking and responsible access to the areas where we walk and climb, please email

helen@mountaineering.ie ■

Celebrate and share our upland heritage

Ireland's mountains and upland areas are rich in reminders of how previous generations have interacted with the landscapes where we walk and climb. Visible reminders include standing stones, the walls of old houses, lazy-beds and disused mines, while place-names sometimes provide invisible evidence of historic events or settlement. Yet Ireland's mountains and upland areas are living landscapes, too, where the interactions between people and the landscape continue to evolve, contributing to our shared cultural heritage.

2018 is the **European Year of Cultural Heritage**. Cultural heritage is diverse; embracing landscape, wildlife and farming practices, as well as literature, art, music, food and folklore. The knowledge of hillwalkers and climbers, and the passion that we have for Ireland's mountains, also form part of our cultural heritage.

The theme for European Year of Cultural Heritage this year in Ireland is **'Make a Connection'**. This theme aims to deepen the connection between people and heritage, and build a legacy of greater public engagement.

Mountaineering Ireland is encouraging all clubs and individual members to tap into the cultural heritage of the places where we walk and climb, and to celebrate and share our upland heritage, for example through guided walks or a photographic exhibition. Doing so in conjunction with an upland community group could make for a mutually beneficial exchange. You could find out more about the mountains where you're active, and it would help to

build understanding within host communities of what interests recreational visitors.

Deepening our connection with the places where we walk and climb will give us more confidence that we're welcome. It will also help us to see how we can enjoy our activities without imposing, and how we can bring greater benefit to the area.

Learn more about the European Year of Cultural Heritage on www.eych2018.com ■

Challenge yourself in 2018

With the season of New Year's resolutions almost upon us, here are twelve suggestions for how you could make a positive difference in Ireland's mountains and upland areas. Challenge yourself, and others, to do one or two things differently when you walk and climb in 2018.

- Car-pool whenever you can – it reduces emissions and saves on parking space.
- Support the areas where you walk and climb by using shops, cafés, pubs and other services.
- Do a five-minute litter-pick around the area where you're parked before you head off for your activity.
- If you come across a farmer on the hills, stop and have a chat.
- Reduce the spread of erosion by keeping to the centre of paths.
- Carry a bag to pick up litter that you come across in the outdoors.
- Get the **Biodiversity Data Capture** app and make one biodiversity report from each day out.
- Spend a day volunteering with **Mountain Meitheal** or the **Mourne Heritage Trust**.
- Report dumping by phoning **1850 365 121** or using the **'See It, Say It'** app. In Northern Ireland call **028 9056 9453**.
- Share the beauty of Ireland's natural environment with others through social media.
- Cut down on flights by booking a holiday in Ireland.
- Organise a club walk using public transport ■

Become a Guppy Friend

Why is there a picture of an exotic fish in the *Irish Mountain Log*?

The fish is a **guppy**, one of the world's mostly widely distributed tropical fish and also a popular aquarium species.

Awareness has grown globally of the impact that plastic packaging and microplastic beads (often from cosmetics and toothpaste) can have on fish and sea birds. Microplastic waste also includes microfibres (less than 5mm long) which detach from acrylic, nylon and polyester fabrics during washing. As much of this waste slips through water treatment plants, the microfibres find their way into the ocean, where fish mistake them for plankton. This is detrimental to the health of the fish and also means that the microfibres may find their way into the human food chain.

In 2015, outdoor clothing company **Patagonia** commissioned research, which showed that a city of 100,000 inhabitants releases a volume of wash-related microfibres equivalent to 15,000 plastic bags every day. That makes a shocking 176,000 bags from

Dublin city and its suburbs, every day. As walkers and climbers, we're contributing to this problem as most of us have a number of fleece and synthetic garments.

The **Guppy Friend** is a solution to help prevent these fibres entering rivers and

oceans, created by the two German surfers who launched the **STOP! MICRO WASTE** manifesto, with financial assistance from Patagonia and a Kickstarter crowd-funding campaign. It's a synthetic bag that you can use to wash fleece and other synthetic clothing in a washing machine. The bag acts as a filter, trapping the tiny synthetic fibres. Using a **Guppy Friend** also means that fewer fibres break off during washing, thus extending the lifespan of your clothing. The bag is being sold at the cost of manufacture and shipping – €20.

Buy a **Guppy Friend bag**, to trap your own microfibre waste, from the **Patagonia** shop in Exchequer Street, Dublin, or online at eu.patagonia.com ■

Nature is for everybody

Since Richard Louv introduced the phrase 'nature-deficit disorder' in his 2005 book *Last Child in the Woods*, there have been many articles published about the consequences of children spending less time outdoors and being alienated from nature.

An expanding body of scientific evidence suggests that nature-deficit disorder contributes to attention difficulties, the development of obesity and higher rates of mental and physical illnesses.

A few years ago, the National Trust in the UK launched a cleverly titled campaign, "50 things to do before you're 11¾." It was successful in providing a structure that encouraged parents to spend adventurous time outdoors with their children. Most of the fifty activities would also work well for those aged 3¾ or 8¾, e.g. going birdwatching, walking barefoot, tracking wild animals or picking blackberries in the wild.

The theme for this year's **Heritage Week** (taking place on August 19-27th) is "Nature and People." Why not use Heritage Week as an occasion to share the delights of Ireland's hills, coast and countryside with friends or family? Bring people of any age outdoors and help them start, or renew, a relationship with nature.

Take a walk, pause and listen for the sounds of nature. Get down close to look at the detail in a wildflower, or watch an insect probing for nectar. You don't need to know the names of flowers or butterflies to point out their beauty. By getting people out touching, smelling and tasting nature you can give them a sense of

the life that's in the outdoors.

Nature supports human life, by providing us with food, pollinating many of our crops, providing us with building materials, recycling much of our waste and filtering our water. Biodiversity underpins our economy, and our health and well-being.

In recent decades, human impacts on biodiversity have accelerated and resulted in increased damage to habitats, loss of species and degradation of our air, water and soils. We need to respect and protect Ireland's natural environment. That can start with helping people to connect with nature and to understand how vital it is to human well-being.

The Heritage Week website has 100 different ideas for events to engage people with nature. Browse the list and make your plan today:

Dump the dumpers

The beauty of Ireland's natural environment plays a big part in what makes our outdoor experiences special. So it is not surprising that we are sad or angry when we come across dumping in the mountains or elsewhere in the countryside. You can make a difference by reporting the problem; and it's easy to do so.

In the **Republic of Ireland**, dumping should be reported through the Environmental Protection Agency's 24-hour national environmental complaints line – **1850 365 121**.

To make it even easier, download the EPA's free '**See It, Say It**' smartphone app. Using the app, you can take a photograph of a pollution incident, whether it be littering, backyard burning, fly-tipping

or water pollution, add a quick description and your contact details, and send the message with automatic GPS location coordinates for follow-up by the relevant authority.

In **Northern Ireland**, phone the Environmental Crime Unit at **028 9056 9453** or email **environmentalcrime@daera-ni.gov.uk**.

By downloading the app or saving the numbers into your phone, you'll be able to respond *immediately* the next time you come across dumping. Early reporting of dumping can help prevent further dumping. It will also reduce costs, if rubbish bags can be removed before they are torn open by animals.

Many Mountaineering Ireland clubs do a clean-up or litter-pick as part of the **National Springclean**. These events are good fun and hugely satisfying. For more information, visit **www.nationalspringclean.org** or take a look at Mountaineering Ireland's tips on **Organising a Club Clean-up** at **<https://tinyurl.com/z4ks9bl>**.

Helping to keep the areas where we walk and climb litter-free could start with carrying a plastic bag to take home your own litter and other items that you come across during the day. Don't think of it as picking up other people's rubbish; you're demonstrating your respect for the environment and helping to ensure that you and others have positive recreation experiences ■

15,000 choices a day – let's make good ones

A quick calculation shows that a 12km hike in the mountains probably involves taking more than 15,000 steps (65 double paces per 100m = 1,300 steps per kilometre). With every step, we make a choice about where to place our foot, so that's roughly 15,600 choices before we add in all the decisions about stopping to eat, taking on and off hats, talking to people, etc.

Few could argue that the worn and muddy path lines across the slopes, ridges and summits of Ireland's mountains are not the most noticeable impact of increased recreation activity in the uplands. By making our 15,000+ choices consciously, we can help to mitigate the spread of erosion. We can do that by keeping to the centre of paths wherever they exist and by choosing to walk on

robust surfaces like rock, or on vegetation and soil that has already been damaged by footfall.

The impact of trampling is less obvious but still visible on well-drained summits, where the small bits of green between the rocks in those places may be rare or

threatened mosses and plants such as **Alpine Clubmoss**, pictured below. Clubmosses are very ancient plants; their fossil records go back over 400 million years. This species was recorded for the first time on the Comeragh Plateau in 2010, even though its predecessors

are likely to have been growing there for centuries.

Ireland has relatively little of the montane heath habitat that supports plants like Alpine Clubmoss. It is all on the high ground, which hillwalkers and climbers are drawn towards. It may not appear as fragile as blanket bog, but thin soils, high winds and low temperatures mean that life on the summit plateau is precarious – even before we arrive. It is just as important, therefore, that we protect summit vegetation by choosing to walk within established path lines, rather than widening the damage.

Get out and enjoy Ireland's mountains responsibly over the winter months, make good choices when you place your feet and, if you come across Alpine Clubmoss, report your find through www.biodiversityireland.ie ■

Time to get engaged

‘There are places where it doesn’t feel like it’s ours anymore, as if the guests have taken over the guesthouse.’ So writes Lake District farmer James Rebanks in his 2015 autobiography *The Shepherd’s Life*. Similar sentiments have been expressed by Irish hillfarmers.

James Rebanks’ book is a captivating read, even for those without an affinity with farming or the Lake District. His evolution from school dropout to sustainable tourism consultant is interwoven with honest descriptions of farm life. He conveys the passion that hill sheep farmers have for their work and their landscape, and he lets us see recreational activities from the farmer’s perspective.

Ireland doesn’t have the visitor traffic of the Lake District, but all those active in the outdoors for more than a few years will have observed a marked increase in the numbers engaging in outdoor recreation activities here. That increase is visible through crowded car parks and more eroded path-lines on our hills. What is less visible is the strain those increased numbers are exerting on the goodwill of the landowners, who we depend upon for access, and on businesses and other local residents in the areas where we conduct our activities.

Responsible enjoyment of Ireland’s mountains is about more than having the technical skills to complete your route and not leaving banana skins behind. To ensure that our activities do not intrude on those who live and work in upland areas, we need to understand the place we are in.

The easiest way to do that is by talking with people. Find out what’s going on in the area; ask who owns the land or what’s the best way to go. A chat with locals in the pub afterwards

HELEN LAWLESS

Neil Salway (Blackstairs Ramblers), Martin Shannon (Chairman, Blackstairs Farming Group) and Mick Monahan (Tullow Mountaineering Club) on Shannon’s Lane in the Blackstairs at the end of Mountaineering Ireland’s Mountain Environment Day in June.

could give you some more information about the place you’ve just been to, and it helps to build understanding within host communities of what interests recreational visitors.

Deepening our connection with the places where we walk and climb will give us more confidence that we’re welcome; it will also help us to see how we can enjoy our activities without imposing, and how we can bring some benefit to the area. You might even encourage an Irish hillfarmer to write his story ■

Help protect peregrines

There are still late clutches of peregrine falcons at some crags as we write, and continued co-operation is needed from climbers so that these birds can rear their young successfully. As disturbance places unnecessary stress on the birds and interrupts their ability to hunt and supply their chicks adequately, Mountaineering Ireland is calling on climbers to withdraw as soon as possible if a bird reacts to your presence (e.g. by screeching, circling or dive-bombing). This is a critical stage in the breeding cycle for peregrines and they should be given a wide berth until the chicks are fully fledged and able to fly properly.

The peregrine, which is protected under European and national legislation, is the fastest creature on the planet, and can dive at speeds of up to 320km/h to strike its prey. When not attacking, the peregrine flies with a series of short wing-beats and alternating glides, tilting to show its pale under-feathers and broad pointed wings.

Peregrines prey on smaller birds such as duck or pigeon, and have at times been subject to persecution. National Parks and Wildlife Service Conservation Rangers, who have responsibility for wildlife protection in the Republic of Ireland, have acknowledged the role that climbers play in protecting peregrines and other cliff-nesting birds. This support is greatly appreciated as the service is currently under-staffed.

► Continued vigilance and responsible behaviour by all climbers will allow these and other birds to breed successfully. If you see human disturbance or suspicious activity at a nest, contact

ANTHONY MCGEEHAN
